

The revolutionary platform you need for rare and orphan disease trials

- Flexible data capture, cleaning, and analysis with encapsia, you can instantly track, review and clean all clinical trial data, whether it was entered via EDC or eSource
- **Harmonize Data Management processes:** Instant data visibility in the platform allows for increased and live collaboration amongst the study team – raise queries and resolve them immediately
- **Improve data quality** with complex validation checks that run immediately on data entry to ensure clean data from the start
- Easily automate data ingest and integration from disparate sources: data from other vendors e.g wearables, sensors, ePRO, eCOA, can be integrated for seamless processing in encapsia. Labs can also be uploaded by the user or by automated transfer rules with minimal intervention

- **Recruit sites where and when you need them, without cost implication:** unlimited number of sites and users provide unrivalled clinical flexibility to meet recruitment targets
- **Have full budget predictability** with fixed monthly conduct fees, regardless of how long your study runs
- **Quick study start-up with BYOD eSource/always available Entry:** downloading eSource gives you the CRF immediately. There is no need for printing CRFs, no shipping logistics and no cost for proprietary hardware

- **Data immediacy with eSource** gives you greater oversight of patient safety. Remote monitoring is available and CRAs can monitor more sites more easily, focusing their effort where it's needed
- **Remove manual reconciliation of lab data:** automatic reconciliation of uploaded data with the Subject CRF saves time. See expected records and include or reject as needed. Out of range values are flagged. Missing records are highlighted for further investigation

Step forward with encapsia and transform your trial today

- **Streamline data transformation and extraction to external tools:** Include structured or unstructured data as needed, filtering or transforming your data on ingest or at point of extraction – improving reconciliation and providing unrivalled overview of your data
- **Seamless data visualization across functions** Visualization of clinical and metadata supports study monitoring and oversight, enabling all stakeholders to make faster, more informed decisions. You see and react to the data that matters to you.
- **Further reduce effort through real-time coding:** entered terms are coded instantly. With just one click you can get a full picture and history for each coded term by seeing how it was originally captured, with all relevant information.
- **Speedy trial start** as encapsia product training is automatic and no training logistics are needed
