

The revolutionary platform for decentralized trials

- **Home visits:** encapsia lets you conduct a trial visit at a patient's home, avoiding the need for patients to travel to site
- **eSource:** encapsia Direct Data Capture (DDC) is an easy to use app designed for any iPad and is easily accessible from the App Store anywhere in the world
- **Smooth patient interaction:** Sites can request drug dispensation, perform drug accountability, or randomize directly from the eSource or Home Visit apps. As IRT data is automatically pushed to encapsia in real time, patient contact time is smooth and quick.

- **Less monitoring:** With DDC there is no transcription of the clinical data, so no need for source data verification (SDV), reducing site visits by trial monitors
- **Data quality:** Complex validation checks run immediately on data entry to ensure clean data from the start
- **Adaptability and easy adoption:** encapsia supports both EDC and eSource DDC within the same study, allowing clinical teams the flexibility to manage site preferences or capabilities as needed

- Inbuilt visualizations of clinical data and metadata support monitoring and oversight of study progress, enabling all stakeholders to make faster decisions
- Third party data, for example from laboratories or wearables, can be uploaded by the user or by automated transfer rules with minimal intervention
- Database availability: encapsia is available 24 x 7 for the entire study team with no end user downtime for mid-study design changes or maintenance.
- Straightforward integration with other systems to support simplified site workflows e.g. eCOA, ePRO, patient randomization or legacy EDC.

Real-time

Collect, query, clean, visualize and analyze all your clinical data in real time, in one system with a single representation of the data,

Choice

eSource, EDC, HomeVisit. Capture data your way and utilize multimedia for remote monitoring and novel study endpoints.

Flexibility

Review flexibly and track and manage issues- all built in.

Availability

Powerful, configurable tools at your fingertips. Your data, where and when you want it.

Step forward with encapsia and transform your trial today
